

Bluebox eMan

Mixed fleet? Engineers in multiple locations?
Frequent updates to manuals?

eMan was created with input from aircraft operators and MROs to deal with the technical document management challenges facing today's maintenance organisations. It minimises the need for the manual distribution and tracking of physical copies of aircraft manuals and updates, and provides accurate version control critical to safety and regulatory compliance.

Technical Library Management System

With eMan, library managers and engineering teams have a web-based platform to access all electronic technical documentation from any location, on a wide range of devices, over any network. This eliminates duplicates, reduces demands on IT resources, and enables managers to update manuals instantly for all users. eMan also provides a single view of usage and simplifies tracking and reporting.

Contact us with your details and we can discuss your requirements – you could have eMan deployed across your organisation in as little as 40 days.

Latest Features

- Document version history recording: identify which version was in use at any point in time with a complete history of document metadata, either in response to a compliance audit or simply to check that tasks were performed consistent with information available at the time
- Subscription management: track OEM subscription expiry dates and be alerted when subscriptions are due to expire
- Physical library management: track and manage physical assets (CDs, DVDs, memory sticks, hard drives, paper manuals)
- Technical document assessment: create distribution lists for new documents or document revisions for review and checking. Allocate response tasks and record who has (or has not) complied
